NEUROVASCULAR PRODUCTS

EVITAR Flow Diverter Stent

FEATURES

- Evitar flow diverter stent is a self-expanding, vascular device allowing controlled and selective modulation of blood flow in extra- and intracranial arteries.
- Device is made from 72 wires nitinol with a radiopaque material added. The proprietary checkerboard pattern provides a very good kink resistance and superior radial force at the same time provides best visibility, making it a device of choice even in very tight vessels.
- It is indicated for use in the treatment of various type of aneurysms such as fusiform, dissecting and circumferential large aneurysms in the intracranial vasculature.
